

Preface

The National Military Strategy, embracing principles of Deterrence, Forward Presence, Crisis Response, and Reconstitution, requires a revisioning for Army installations. Central to this new installation role is the capacity to respond rapidly from the CONUS base with overwhelming force in response to regional crises, to enhance deterrence, and to perform peacetime missions. This strategy marks the dawn of a new era for Army installation management and philosophy.

Installations of the twenty-first century must have the capability to train, mobilize, deploy, sustain, support, recover, and reconstitute assigned and mobilized operating forces. The traditional boundary between tactical and sustaining base activities will disappear as the installation power projection platform assumes an active role in the welfare of deployed operating forces.

The installation/garrison commander has enormous responsibilities as he guides the installation to support the National Strategy and the movement of our installations to power projection platforms. To execute this successfully, the commander must understand the core installation management functions and understand the responsibilities of an installation commander.

FM 100-22 provides guidance for readiness, business practices, and quality of life as it pertains to military installation management. This publication provides the processes for the core installation management functions.
